Bridger Jones

CERTIFICATE PROGRAMME

WHAT IS THE BRIDGER JONES CERTIFICATE PROGRAMME?

Bridger Jones will provide a certificate confirming that your paper was edited by native English speakers at Bridger Jones and, assuming all of the changes we proposed are incorporated into the manuscript, is ready for journal submission. It will allow journal editors to feel confident that the English language in your paper has been reviewed and verified.

WHAT WILL THIS CERTIFICATE DO FOR ME?

This certificate informs all journals that your manuscript's use of the English language is up to the required standards. This implies that your paper will already be one step closer to peer review and ultimately, publication.

When submitting your manuscript to a journal, include this certificate as proof that the language in your paper is ready for publication. If you accept all of our editors' changes and your paper is later rejected by your journal for English language errors, you can take advantage of our free Second Review service.

NOTE: Since Bridger Jones obviously cannot take responsibility for any part of your manuscript we did not edit, any changes you make to your manuscript after receiving the final version from Bridger Jones are not covered by the certificate. Therefore, the certificate will have a verification code and website link for the journal editors to verify that the certificate is unique and is being used for the document Bridger Jones edited. Journal editors (and anyone you provide with this certificate verification code) will be able to download the version of the manuscript that Bridger Jones returned to you.

HOW DO I RECEIVE MY CERTIFICATE?

When we are happy with the English in your paper (we work with you until your paper is ready by requesting revisions and rewrites where necessary), you will be provided with a link to apply for your certificate. You will receive your certificate via email.

HOW DO I USE MY CERTIFICATE?

Simply submit your certificate as one of your documents in the journal submission process.
